

ANUSHA PAYIDIPARTHI

Senior Full-Stack Developer | React.js · Java / Spring · Microservices · REST / GraphQL

341-356-2072 payidiparthianusha@gmail.com linkedin.com/in/anusha-p-678a25251 San Francisco Bay Area

Open to Remote / Hybrid / Onsite

PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 10+ years of hands-on enterprise application development for Fortune 500 clients across Banking, Telecom, and Technology. Strong React.js ownership—component architecture, TypeScript, Redux Toolkit, React Query, and accessible SPA delivery—paired with full-stack work on RESTful APIs, GraphQL, MongoDB, and Node.js services. Regular partner to Java / J2EE / Spring Boot microservice teams, integrating Spring MVC and Spring JDBC-backed APIs and Apache Kafka-driven event data into secure, high-traffic user experiences. Skilled in application design, requirement analysis, web security, WCAG accessibility, cross-browser compatibility, and Agile / Scrum delivery. Uses AI technologies (GitHub Copilot, Cursor) to accelerate implementation, refactoring, and reviews while protecting quality and compliance.

TECHNICAL SKILLS

React.js	React.js, TypeScript, JavaScript (ES6+), Redux Toolkit, React Query, Hooks, Context API, custom hooks, reusable component libraries, SPA architecture, HTML5, CSS3, SCSS, Bootstrap, Webpack, Vite
Java / Spring	Java, J2EE, Servlets, Spring, Spring MVC, Spring JDBC, Spring Boot, enterprise microservices integration, API contract collaboration, session and security alignment with Java backends
APIs & data	RESTful APIs, GraphQL, OpenAPI / Swagger, Axios / Fetch, JSON, MongoDB, Mongoose, MySQL, PostgreSQL, SQL / NoSQL modeling, database interactions
Messaging	Apache Kafka event-driven integration, near-real-time UI refresh from Kafka-backed topics via API gateways and BFF layers
AI technologies	GitHub Copilot, Cursor — AI-assisted coding, refactoring, debugging, test authoring, and code review acceleration
Quality & delivery	Jest, React Testing Library, Cypress, Jasmine, Karma, TDD / BDD, Git, GitHub, GitLab, Jenkins, Docker, Azure DevOps, CI/CD, JIRA, Postman, Agile / Scrum
UX & security	WCAG 2.1 accessibility, cross-browser compatibility (Chrome, Edge, Safari, Firefox), MFA / OTP / QR auth UI, XSS / CSRF awareness, secure token handling, responsive design

CORE COMPETENCIES

- | | |
|---|---|
| ■ React.js — strong hands-on experience | ■ Java / J2EE / Servlets (enterprise integration) |
| ■ Spring / Spring MVC / Spring JDBC | ■ Spring Boot & microservices |
| ■ RESTful APIs & GraphQL | ■ Apache Kafka |
| ■ MongoDB & database interactions | ■ AI technologies |
| ■ Enterprise application development | ■ Application design & requirement analysis |
| ■ Web security, accessibility & cross-browser compatibility | ■ Agile / Scrum methodologies |

PROFESSIONAL EXPERIENCE

Wells Fargo

Senior Frontend / Full-Stack Developer

Dec 2021 – Present

San Francisco, CA

Own end-to-end React UI and BFF delivery for secure, high-traffic banking workflows—authentication, reusable forms, and data-heavy reporting—integrated with Java Spring Boot REST microservices and event-driven data feeds.

- Architected and shipped production React.js + TypeScript applications using Hooks, functional components, and modular patterns for mission-critical banker workflows used at enterprise scale.
- Led application design and requirement analysis with product, UX, risk, and Java microservice teams—converting business rules into stories, acceptance criteria, UI flows, and API contracts.
- Built secure authentication UIs (OTP and QR verification) aligned with enterprise web security, session handling, and compliance standards.

REACT.JS ARCHITECTURE, APIS, JAVA / SPRING COLLABORATION, KAFKA, SECURITY & DELIVERY

- Designed reusable dynamic form systems with real-time validation, reducing duplicated form logic and speeding feature delivery across multiple Agile squads.
- Implemented Redux / Redux Toolkit for sessions, auth state, audit filters, and reporting, creating predictable, scalable client-state architecture.
- Integrated RESTful APIs and GraphQL operations via Axios/Fetch and React Query (caching, background refresh, custom hooks), keeping data-heavy screens responsive under load.
- Collaborated with Spring Boot microservice owners on resource design, error contracts, and payload shape—aligning React clients with Spring MVC controllers and Spring JDBC-backed data services.
- Applied working knowledge of Java / J2EE / Servlet session, filter, and security behavior when diagnosing auth, CSRF, and API gateway issues across the banking stack.
- Delivered near-real-time reporting and alert experiences fed by Apache Kafka topics (audit events, account alerts, processing status) surfaced through API gateways and a Node.js BFF.
- Designed a Node.js BFF to fan out and reshape multiple Java microservice calls, reducing UI complexity, over-fetching, and perceived latency.
- Improved perceived performance with lazy loading, code splitting, memoization, and render optimization on data-intensive screens serving large concurrent user bases.
- Enforced WCAG 2.1 accessibility (keyboard paths, ARIA, focus order, contrast) and verified cross-browser compatibility on Chrome, Edge, Safari, and Firefox.
- Hardened the client against common web threats: secure token storage patterns, XSS-safe rendering, CSRF-aware request flows, and least-privilege UI gating for sensitive account actions.
- Leveraged AI technologies (GitHub Copilot, Cursor) to accelerate feature implementation, refactoring, debugging, and test authoring while reviewing all AI-assisted output for security and standards.
- Established quality bars with Jest and React Testing Library; practiced TDD/BDD on critical paths; mentored peers through code reviews and React best practices.
- Operated in Agile / Scrum: sprint planning, backlog refinement, daily stand-ups, demos, and retrospectives; tracked work in JIRA and released via Azure DevOps CI/CD.
- Partnered daily with UX (Figma), product, QA, and Java backend teams to translate complex banking requirements into intuitive, production-ready software.

Jest WCAG 2.1 GitHub Copilot / Cursor Agile / Scrum

SELECTED INITIATIVES

- **Banker Compass MFA:** Designed and shipped adaptive OTP and QR authentication that selects the correct MFA path from customer status before high-risk account actions proceed.
- **Audit & reporting workspace:** Built filterable, high-volume reporting UI with React Query caching and Kafka-backed event freshness so bankers work from current, trusted data.
- **Enterprise form platform:** Extracted a shared dynamic-form library with schema-driven validation, cutting duplicate implementation across squads and stabilizing accessibility behavior.
- **Microservice BFF:** Orchestrated multiple Spring Boot services behind a single UI-facing contract, isolating breaking backend changes from the React application.

T-Mobile

Senior Frontend / Full-Stack Developer

Jul 2020 – Nov 2021

Hyderabad, India

Led frontend modernization of a customer-service platform by migrating legacy Angular to React.js, and delivered Node.js / Express REST APIs plus MongoDB-backed data access supporting the SPA. Worked against enterprise Java / Spring services used for plans, billing, and account history.

- Led Angular-to-React.js migration with component-based architecture, shared UI patterns, and a phased cutover that improved scalability and team velocity without disrupting live customer care.
- Facilitated requirement analysis and application design workshops with product, UX, and backend stakeholders to sequence migration slices, define API contracts, and de-risk cutover.
- Designed and implemented Node.js / Express.js RESTful APIs for customer-service workflows, enabling reliable full-stack delivery across UI and backend services.
- Modeled and queried MongoDB collections (Mongoose) for customer-service views, caching supporting data, and operational lookups—owning database interactions for the SPA's BFF layer.
- Integrated React clients with enterprise Java Spring Boot / Spring MVC APIs for plans, offers, and account history; aligned payloads and error handling with existing J2EE service boundaries.
- Consumed event-driven account and offer updates originating from Apache Kafka pipelines, presenting timely status in agent and customer UIs.
- Built responsive, accessible React components meeting WCAG 2.1 and enterprise design guidelines for customer-facing and agent-facing service flows.
- Verified cross-browser compatibility and responsive breakpoints so service-desk and consumer experiences held up across Chrome, Edge, Safari, and Firefox.
- Improved page-load performance through Webpack code splitting, lazy loading, and bundle optimization on heavier account-history and offer-discovery routes.
- Applied web security practices on the BFF: authenticated REST contracts, input validation, and least-privilege data exposure to the browser.
- Strengthened release quality with automated Jasmine/Karma and React test coverage during and after migration, reducing regression defects.
- Coordinated with global UX, Java backend, QA, and DevOps teams across time zones for zero-downtime releases in an Agile / Scrum operating model.

React.js Angular migration Node.js / Express RESTful APIs MongoDB Spring Boot APIs Apache Kafka WCAG 2.1 Webpack
Agile / Scrum

PLATFORM OUTCOMES

- Replaced a legacy AngularJS/Angular surface with a maintainable React component model, making subsequent features cheaper to ship and easier to test.
- Gave the SPA a stable BFF and MongoDB-backed read models so UI teams were not blocked on every Java service change.
- Documented UI and accessibility standards so inclusive design was part of the build, not a retrofit.

Berkadia Commercial Mortgage LLC

UI / Full-Stack Developer

Jan 2018 – Jul 2020

Hyderabad, India

Built an enterprise OCR document-processing platform—Angular UI with Node.js / Express APIs, GraphQL queries, and MongoDB persistence—that converted scanned mortgage documents into searchable, structured data for commercial-mortgage operations.

- Developed Angular + TypeScript UIs for upload, processing status, and document management used daily by mortgage operations teams.
- Gathered requirements from operations and product owners; translated document-lifecycle rules into application design, user stories, and API contracts.
- Built Node.js / Express RESTful APIs and GraphQL endpoints for OCR processing, file storage, job status, and search—including batch handling for large document volumes.

Berkadia Commercial Mortgage LLC — continued

Jan 2018 – Jul 2020

- Designed MongoDB document models (metadata, OCR text, job state, audit fields) and implemented Mongoose-based database interactions for ingest, status, and retrieval.
- Created drag-and-drop file upload UX with progress tracking and real-time processing feedback powered by backend job endpoints.
- Integrated with Java / Spring Boot services used for downstream mortgage systems; coordinated REST and GraphQL contracts with Spring MVC resource owners.
- Connected async OCR workflows to high-volume intake, including status events consistent with an event-driven (Kafka-style) processing pipeline.
- Published OpenAPI / Swagger documentation so Java and UI teams could adopt APIs consistently and reduce integration defects.
- Maintained Jasmine/Karma suites with 80%+ coverage on key modules and delivered iteratively with product owners in Agile sprints.
- Applied accessibility and cross-browser checks on operations screens so high-volume document work remained usable on standard enterprise browsers.

Angular TypeScript Node.js / Express RESTful APIs GraphQL MongoDB OpenAPI Spring integration Jasmine / Karma Agile

Microsoft

Sep 2016 – Dec 2017

UI Developer

Hyderabad, India

Delivered enterprise SPA features for collaboration and innovation-tracking workflows, integrating live REST data from Java / Spring-backed services in an Agile delivery model.

- Built enterprise single-page application features with AngularJS (directives, services, filters) for collaboration and innovation-tracking workflows.
- Participated in application design and requirement analysis with product and engineering, turning workflow rules into reusable UI services and REST integrations.
- Integrated RESTful APIs for interactive, data-driven UIs; coordinated with Java / Spring MVC service teams on contracts, pagination, and error states.
- Shipped enhancements and performance fixes with Jasmine unit tests; collaborated with QA on regression coverage.
- Applied consistent HTML/CSS patterns for cross-browser compatibility inside a large enterprise environment.
- Worked in Agile / Scrum sprints using Visual Studio and Git, contributing to demos and iterative backlog delivery.

AngularJS JavaScript HTML5 / CSS3 RESTful APIs Spring MVC APIs Jasmine Agile

Smart Data Enterprises | Grandeur Educational Services

May 2015 – Aug 2016

Software Developer / Associate Software Developer (MEAN Stack)

India

Built full-stack MEAN applications for hotel, e-commerce, and SaaS platforms—UI, REST APIs, MongoDB data models, and tests—establishing end-to-end ownership early in career.

- Delivered AngularJS + Node.js + Express.js applications with client routing, two-way binding, and modular UI components for product-facing workflows.
- Designed MongoDB / Mongoose schemas and implemented CRUD database interactions for catalogs, bookings, users, and operational records.
- Built RESTful APIs for persistence, authentication-adjacent flows, and business CRUD; documented endpoints for consuming clients.
- Applied academic and project Java / J2EE / Servlet and Spring MVC foundations when integrating with or documenting Java-based partner services.
- Set quality habits with Jasmine/Karma tests and delivered in Agile teams with frequent requirement clarification and demo cycles.

AngularJS Node.js Express MongoDB / Mongoose REST Java / Spring foundations Jasmine / Karma Agile

EDUCATION

Bachelor of Technology (B.Tech), Computer Science

Jawaharlal Nehru Technological University (JNTU)

2014

Coursework included Java, J2EE / Servlets, web application development, relational databases, and software engineering—foundations later applied while integrating React and Node applications with Spring MVC, Spring JDBC, and Spring Boot microservices in enterprise programs.

ROLE ALIGNMENT — HOW EXPERIENCE MAPS TO THIS POSITION

Required capability	Evidence from delivery
React.js — strong hands-on	Primary UI stack at Wells Fargo and T-Mobile: TypeScript, Hooks, Redux Toolkit, React Query, reusable libraries, performance, and tests in production banking and telecom apps.
Java / J2EE / Servlets; Spring / Spring MVC / Spring JDBC; Spring Boot & microservices	Day-to-day integration with Java Spring Boot microservices; contract design with Spring MVC / JDBC-backed services; diagnosis of servlet/session/security behavior; B.Tech Java/J2EE foundation.
RESTful APIs & GraphQL	Consumed and built REST APIs (Node/Express and Java service clients); GraphQL at Berkadia and Wells Fargo data access; OpenAPI/Swagger documentation.
Apache Kafka	Near-real-time UIs fed by Kafka-backed audit, alert, and processing topics via gateways/BFF; event-driven OCR/status patterns at Berkadia and T-Mobile.
MongoDB & database interactions	MEAN-stack MongoDB/Mongoose ownership; MongoDB read models at T-Mobile; document metadata and job-state models for OCR at Berkadia; SQL familiarity (MySQL, PostgreSQL).
AI technologies	GitHub Copilot and Cursor used in production delivery for implementation, refactoring, debugging, and test authoring, with human review for security and quality.
Enterprise application development	Fortune 500 banking, telecom, mortgage, and technology platforms; regulated workflows, high traffic, and cross-team release discipline.
Application design & requirement analysis	Story writing, API contract design, Figma collaboration, phased migrations, and acceptance criteria with product, UX, and backend partners.
Web security, accessibility & cross-browser compatibility	MFA/OTP/QR UIs, XSS/CSRF-aware patterns, WCAG 2.1, and Chrome/Edge/Safari/Firefox verification on customer and banker surfaces.
Agile / Scrum methodologies	Sprint planning, refinement, stand-ups, reviews, retrospectives, JIRA, and CI/CD (Jenkins, Azure DevOps) across all listed employers.

ADDITIONAL STRENGTHS

ENGINEERING PRACTICES

- Reusable UI libraries and design-system alignment
- BFF / microservices UI architecture
- TDD / BDD and pull-request quality gates
- CI/CD with Azure DevOps, Jenkins, Docker, Git
- Mentoring, code review, and knowledge sharing

COLLABORATION

- Global, cross-timezone delivery with UX, QA, DevOps, and Java service teams
- Figma-based design validation before build
- Zero-downtime release coordination
- Clear written API and UI documentation
- Stakeholder-ready demos in Scrum reviews
