

Professional Summary

- Results-driven Senior UI / Frontend Developer with 10+ year of experience architecting, designing, and delivering high-performance, scalable, enterprise-grade web applications across Banking, Telecom, and Technology domains, including Fortune 500 clients.
- Strong expertise in modern frontend technologies including React.js, Angular, AngularJS, TypeScript, JavaScript (ES6+), GraphQL, Next.js, HTML5, CSS3, SCSS, TailwindCSS, building responsive, accessible, and high-performing UI applications.
- Hands-on experience in building MEAN stack ,MERN stack projects and integrating RESTful APIs and GraphQL services using Node.js and Express.js, enabling seamless communication between frontend and backend systems.
- Proficient in Test-Driven Development (TDD) and Behavior-Driven Development (BDD) methodologies, ensuring high-quality code.
- Experience in CI/CD pipelines and DevOps practices using Jenkins, Git, GitHub, GitLab, Docker, and automated build/release workflows, enabling continuous integration and faster deployments.
- Strong background in responsive web design, cross-browser compatibility, and accessibility standards (WCAG 2.1), ensuring inclusive and user-friendly interfaces.
- Experience working in Agile/Scrum environments, actively participating in sprint planning, backlog grooming, stand-ups, retrospectives, and delivering features in iterative cycles.
- Proven leadership in mentoring junior developers, conducting code reviews, maintain documentation and enforcing coding standards, improving team productivity and code quality.
- Experience in AI-assisted development tools like GitHub Copilot, improving developer productivity and accelerating code delivery.
- Experienced with Kubernetes, Jenkins, GitHub Actions, and Spinnaker for CI/CD and deployment automation; Segment for analytics; Datadog and Splunk for monitoring and error tracking; and FullStory for user behavior analysis and troubleshooting.

Technical Skills :

Category	Technologies
Frontend	React.js, Next.js, Angular (Angular 18, AngularJS), TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, TailwindCSS, Material UI
State Management	Redux, Context API, NgRx, Redux saga
Backend	Node.js, Express.js, REST APIs, GraphQL, websockets
Testing	Jest, React Testing Library, Jasmine, Karma, Cypress, Selenium, Mocha, Enzyme
Databases	MongoDB, MySQL, PostgreSQL
DevOps & Tools	Git, GitHub, GitLab, Jenkins, Docker, CI/CD, Webpack, npm, Yarn, Vite
API & Integration	RESTful Services, API Integration, Axios, Fetch
UI/UX & Design	Responsive Design, Accessibility (WCAG 2.1), UI/UX Principles, Figma
Monitoring & Debugging	Redux DevTools, Chrome DevTools, Reactotron
Methodologies	Agile, Scrum, TDD, BDD
Other Tools	VS Code, Postman, JIRA, GitHub Copilot, Codex

Education

Bachelor of Technology (B.Tech) in Computer Science
Jawaharlal Nehru Technological University (JNTU) | 2014

Company: Wells Fargo, San Francisco, CA
Role: Senior UI Developer

Dec 2021 – Present

Banker Compass Application - Customer Account management

Project Description: Developed a frontend application called Compass for Wells Fargo, which is used by bankers to do sensitive banker transactions based on multifactor authentication status of a customer before proceeding with account-related actions. The application supports multi-factor authentication. Based on the available customer information, the system dynamically guides the banker through the appropriate authentication flow. Once the authentication is successful, the application displays the customer's status and relevant details, enabling the banker to take the next steps efficiently.

Role & Responsibilities:

- Designed and developed scalable, high-performance UI applications using React.js, TypeScript, and modern front-end architecture, supporting mission-critical banking workflows.
- Built secure authentication interfaces (OTP, QR-based verification) aligned with enterprise security and compliance standards.
- Developed dynamic and reusable form components using React Hooks and advanced validation logic, enabling real-time user input validation.
- Implemented Redux / Redux Toolkit for centralized state management, handling user sessions, authentication states, audit filters, and reporting workflows.
- Optimized API interactions using Axios / Fetch and advanced asynchronous patterns.
- Implemented BFF layer for data modifications and multiple API calls in Node.js
- Collaborated with UX designers, backend engineers, and product teams, translating business requirements into intuitive and secure UI solutions.
- Utilized Figma Interactive Linking and high-fidelity prototypes to validate user flows and technical feasibility before committing engineering resources.
- Participated in Agile/Scrum ceremonies, delivering features consistently within sprint timelines and improving release predictability.
- Ensured code quality and test coverage using Jest and React Testing Library And BDD Automation, maintaining stable and production-ready applications.
- Reviewed and validated all AI-generated code to ensure security, performance, and business requirement alignment.
- Applied Copilot suggestions for debugging issues, optimizing performance, and improving code readability.
- Used GitHub Copilot in Visual Studio Code to accelerate frontend development and reduce repetitive coding tasks.

Environment: React.js, Node.js, TypeScript, JavaScript (ES6+), Redux, Redux Saga, HTML5, CSS3, Bootstrap, REST APIs, Axios, Microservices Architecture, Azure, GitHub Copilot, Git, Jest, React Testing Library, Agile/Scrum, Vite, Automation testing

Client: T-Mobile, Hyderabad, India

Jul 2020 – Dec 2020

Role: Frontend Developer— Customer Service Platform

Project Description: Developed the customer service platform to help T-mobile customers to register with them to get new plans and offer details. Customer or service desk person can check a specific customer's plan details and history.

Key Responsibilities

- Designed and developed high-performance UI applications using React.js, TypeScript.
- Designed the backend-for-frontend (BFF) layer and orchestrated RESTful API contracts utilizing Node.js and Express.js to ensure secure, low-latency communication.
- Authored enterprise UI/UX design and component specifications, backing WCAG 2.1 accessibility and strict regulatory compliance guidelines into the foundational codebase.
- Instituted performance and asset-delivery patterns—including Webpack code-splitting and lazy-loading—resulting in a reduction in initial page load times.
- Leveraged Figma Auto Layout, frames, and structured vector tools to translate complex UI designs into scalable, component-based React architectures.
- Established the enterprise testing framework strategy using Jasmine and Karma, introducing automated regression gates that reduced production defects.
- Aligned global engineering, UX, DevOps, and QA teams across multiple time zones on architectural patterns, ensuring seamless continuous integration and zero-downtime deployment pipelines.
- Utilized modern frontend build tools (Webpack) for efficient bundling, code splitting, and optimized asset delivery.

Environment : React.js, Node.js, Express.js, MongoDB, JavaScript, HTML5, CSS3, REST APIs, Jasmine, Karma, Webpack, Git, Postman, Agile/Scrum, Figma, MERN stack.

Client: Berkadia Commercial Mortgage LLC, Hyderabad, India

Jan 2018 – Jul 2020

Role: UI Developer

Project Description: Developed an enterprise OCR document processing platform using Angular and Node.js, enabling automated conversion of scanned mortgage documents into searchable, structured digital formats, improving processing efficiency and accuracy.

Key Responsibilities

- Developed scalable UI applications using Angular 10 and TypeScript, enabling document upload, processing, and management workflows.
- Designed and implemented RESTful APIs using Node.js and Express.js, supporting OCR processing, file storage, and backend integrations.
- Built advanced file upload modules with drag-and-drop functionality, real-time processing feedback, and progress tracking for enhanced user experience.
- Implemented asynchronous processing workflows and API integrations, ensuring efficient handling of large document volumes.
- Created OpenAPI/Swagger documentation for REST endpoints, improving API usability and cross-team collaboration.
- Developed and maintained unit test suites using Jasmine and Karma, achieving 80%+ code coverage and improving application reliability.
- Collaborated with product owners and Agile teams, delivering features in iterative sprint cycles and aligning with business requirements.

Environment: Angular 10, TypeScript, Node.js, Express.js, GraphQL, JavaScript, HTML5, CSS3, REST APIs, OpenAPI/Swagger, Jasmine, Karma, Git, Agile/Scrum

Client: Microsoft, Hyderabad, India

Sep 2016 – Dec 2017

Role: UI Developer

Project Description: Contributed to a digital transformation platform (SPA) using AngularJS, enabling enterprise collaboration, innovation tracking, and real-time data-driven workflows.

Key Responsibilities

- Developed dynamic Single Page Applications (SPA) using AngularJS 1.x, leveraging two-way data binding for real-time UI synchronization.
- Created reusable components including directives, services, and filters, improving code modularity and maintainability.
- Integrated RESTful APIs and backend services, enabling seamless data flow and interactive user experiences.
- Implemented bug fixes, enhancements, and performance improvements, ensuring application stability and alignment with business needs.
- Collaborated with cross-functional teams (product, QA, backend) to gather requirements and deliver scalable UI solutions.
- Wrote and maintained unit tests using Jasmine, ensuring code quality and reducing regression issues.

Environment : AngularJS 1.x, JavaScript, HTML5, CSS3, REST APIs, Jasmine, Git, Visual Studio, Agile

Client: Smart Data Enterprises, Hyderabad, India

Mar 2016 – Aug 2016

Role: Associate Software Developer

Project Description: Developed Single Page Applications (SPA) for hotel management and e-commerce platforms using AngularJS and Node.js, focusing on dynamic UI, API integration, and scalable backend services.

Key Responsibilities

- Developed AngularJS-based SPAs with client-side routing and two-way data binding, enabling dynamic and responsive user interfaces.

- Designed and implemented RESTful APIs using Node.js and Express.js, supporting CRUD operations and backend service integration.
- Integrated MongoDB with Mongoose ODM, enabling efficient data modeling, querying, and persistence.
- Built and executed unit test cases using Jasmine and Karma, ensuring application stability and code quality.
- Participated in Agile/Scrum ceremonies, collaborating with cross-functional teams to deliver features within sprint cycles.

Environment: AngularJS 1.x, Node.js, Express.js, MongoDB, Mongoose, JavaScript, HTML5, CSS3, REST APIs, Jasmine, Karma, Agile/Scrum

Client: Grandeur Educational Services, India

May 2015 – Dec 2015

Role: Software Developer

Project Description: Built full-stack web applications for e-commerce and SaaS platforms using MEAN stack (AngularJS, Node.js, MongoDB), focusing on API development, data integration, and scalable UI components.

Key Responsibilities

- Developed RESTful APIs using Node.js and Express.js, enabling CRUD operations and seamless backend integration.
- Integrated MongoDB with Mongoose ODM, supporting efficient data storage, retrieval, and schema design.
- Built dynamic UI components using AngularJS, leveraging two-way data binding for responsive user experiences.
- Created and executed unit tests using Jasmine and Karma, ensuring code quality and reducing defects.
- Participated in Agile/Scrum practices, contributing to sprint planning, daily stand-ups, and iterative feature delivery.

Environment

AngularJS 1.x, Node.js, Express.js, MongoDB, Mongoose, JavaScript, HTML5, CSS3, REST APIs, Jasmine, Karma, Agile/Scrum
